EDUCATION

Stony Brook University

Stony Brook, NY

Bachelor of Science in Computer Science

May 2028

Double Major in Applied Mathematics and Statistics

GPA: 3.96

Relevant Coursework: Analysis of Algorithms: Honors, Data Structures, System Fundamentals II, Principles of Programming Languages, Fundamentals of Software Development, Linear Algebra, Survey of Probability and Statistics

Honors/Scholarships/Awards:

- Computer Science Honors Program
- University Scholars

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, C, Python, Java, SQL, SML, Prolog, HTML5, CSS3

Frameworks & Libraries: React, Node.js, Tailwind, ElizaOS, pandas, NumPy, Matplotlib, scikit-learn, Lex/Yacc, Regex

Tooling & Environments: Git, Vite, Vitest, Docker, PostgreSQL (pgAdmin), Linux/POSIX, Bun, GDB, Valgrind, AddressSanitizer, VS Code, IntelliJ IDEA, Jupyter, Ollama, GitHub Copilot, OpenAI Codex, Arweave (Permaweb)

EXPERIENCE

DeScAI

Stony Brook, NY

Software Engineer

January 2026 - Present

- Engineered a *back-end* state-management workflow daemon for *ElizaOS* AI framework utilizing *PostgreSQL*, *Docker*, and *SQL* migrations for automating polling, submission, and confirmation of *Arweave* transactions.
- Collaborated with a team of 5+ developers to debug, optimize, and deploy the DeScAI web *front-end* with *Vite*, *React*, & *TypeScript* while integrating *Wander Wallet* signing for secure *blockchain-native* comment publishing.
- Implemented on-chain data processing pipelines, mapping *Arweave* gateway responses into *dynamic UI data structures* for seamless customer-facing interface rendering from decentralized *Permaweb* storage.

LEADERSHIP

Wolfie's Big Band

Stony Brook, NY

President

April 2025 - Present

- Directed operations, budgeting, and cross-collaboration for a large-scale Masquerade Ball of 200+ attendees, coordinating with 20+ student & local organizations to raise \$3,000+ for charitable causes.
- Orchestrated a 15+ member jazz band in weekly rehearsals, led logistics and performances for 10+ yearly live events averaging 100+ attendees, and organized detailed tasks for a 5 person executive board.
- Cultivated an inclusive and supportive group culture through one-on-one mentorship and monthly engaging group bonding activities, accelerating group retention to over 80%.

PROJECTS

Semantic Analyzer, Independent Project

January 2026

- Architected a *natural language processing* pipeline in *Python* using *pandas* and *Regex* to tokenize, cull, and process through *TF-IDF* vectorization 50k+ raw IMDb reviews.
- Fine-tuned a *logistic regression training model* with *scikit-learn* to predict review sentiment with 88%+ accuracy and *Matplotlib* to visualize model performance and analyze predictive token weights.

POSIX/UNIX C Fuzzer, Class Project

April 2026

- Built a *multi-process C* fuzzer with *UNIX* for *bidirectional inter-process communication* and safe *POSIX* signal handling and shared memory that was tested using an event-handler with *Criterion*.
- Designed control-flow graph logic with bitmaps/hashsets for input discovery tracking across concurrent runners.
